## Adaptation in Metapopulations: How Interaction Changes Evolution (Paperback)

By Michael J. Wade

The University of Chicago Press, United States, 2016. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book. All organisms live in clusters, but such fractured local populations, or demes, nonetheless maintain connectivity with one another by some amount of gene flow between them. Most such metapopulations occur naturally, like clusters of amphibians in vernal ponds or baboon troops spread across the African veldt. Others have been created as human activities fragment natural landscapes, as in stands of trees separated by roads. As landscape change has accelerated, understanding how these metapopulations function and specifically how they adapt has become crucial to ecology and to our very understanding of evolution itself. With *Adaptation in Metapopulations*, Michael J. Wade explores a key component of this new understanding of evolution: interaction. Synthesizing decades of work in the lab and in the field in a book both empirically grounded and underpinned by a strong conceptual framework, Wade looks at the role of interaction across scales from gene selection to selection at the level of individuals, kin, and groups. In so doing, he integrates molecular and organismal biology to reveal the true complexities of evolutionary dynamics from genes to metapopulations.

### Reviews

*The publication is not difficult in study preferable to fully grasp. It really is rally intriguing throug looking at period of time. I found out this pdf from my dad and i advised this ebook to find out.*

-- **Fabiola Hilpert**

*This written pdf is great. It is really simplistic but surprises within the 50 percent of the pdf. I realized this pdf from my dad and i advised this pdf to understand.*
