

## An Elementary Manual of New Zealand Entomology Being an Introduction to the Study of Our Native Insects

---

By George Vernon Hudson

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1892 edition. Excerpt: . . . The perfect fly appears in about six weeks time, its great agility and large white scales rendering it very conspicuous. Family MUSCIDE. *Eurigaster marginatus* (Plate VII. , fig. 7). Another parasitic species, its larva inhabiting the caterpillars of various noctuae which it destroys just before they change into the chrysalis state. The pupa of the parasite lies in a small oval cell constructed in the earth by its larva. A variable number of these maggots are found associated in one host, the smaller caterpillars only harbouring a single individual, while a large larva will frequently contain three or four. This species has been bred from the following Lepidoptera: *Mamestra composita*, *M. ustistriga* and *M. mutans*. It also occurs in the curious *CEceticus omnivorus*, being found in the cocoons of that moth in numbers varying from two to eleven, or even more, and it is...
